1. What is the output of the following nested loop?

```
| 2 3 4 5 6 7 | = 1 | 2 | 2 | 3 4 5 6 7 | = 1 | 2 | 2 | 3 | 4 5 6 7 | | = 1 | 2 | 2 | 3 | 4 5 6 7 | 8 | = 1 | 2 | 2 | 2 | 3 | 4 5 6 7 8 | 4 5 6 7 8 9 | = 2 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 9 | = 1 | 3 | 4 5 6 7 8 | = 1 | 3 | 4 5 6 7 8 | = 1 | 3 | 4 5 6 7 | = 1 | 3 | 4 | 4 | 4 | 
for i in range(1,7):
```

2. Nested loops are useful for iterating over pixels in a digital image. For example:

```
import image
img = image.Image("luther.jpg")
win = image.ImageWin(img.getWidth(), img.getHeight())
img.draw(win)
img.setDelay(1,15) # setDelay(0) turns off animation
  for row in range(img.getHeight()): 

loop over rows in the image for col in range(img.getWidth()): 

p = img.getPixel(col, row) 

gets a pixel, stores it in p
                   newpixel = image.Pixel(newred, newpreen, newblue)

img.setPixel(col, row, newpixel)

clor of a pixel'

red

green

set blue value to zero

newpixel = image.Pixel(newred, newgreen, newblue)

img.setPixel(col, row, newpixel)

cossign newpixel

rew(win)

citonclick()
     img.draw(win)
    win.exitonclick()
```

3. What is the output of the following code?

4. How can numbers and strings be combined?

PRACTICE WITH STRINGS – SOLUTIONS

CS 125

Working with a partner/group, use the following steps to solve each of the following problems.

- (a) Plan your function on the white board (either on the classroom wall or on Zoom). Write out your entire program. Think about what errors might occur and how to fix them.
- (b) Plan multiple test cases for your function. What input will you send to your function? What value should the function return?
- (c) Only after you have completed steps (a) and (b) should you type your code in Python.
- (d) After you have typed your function, run your test cases. Does your function work? If not, how can you fix it?
- 1. Write a program that converts an image to blue and yellow only. To do this, iterate over all pixels in the original image. For each pixel, if the sum of the red, green, and blue values is less than 383, then assign blue (0, 0, 255) for to the corresponding pixel in the new image; otherwise assign yellow (255, 255, 0) for that pixel.

```
import image
img = image.Image("luther.jpg")
win = image.ImageWin(img.getWidth(), img.getHeight())
img.draw(win)
img.setDelay(10, 100) # setDelay(0) turns off animation
for row in range(img.getHeight()):
    for col in range(img.getWidth()):
        p = img.getPixel(col, row)
        colorsum = p.getRed() + p.getGreen() + p.getBlue()
        if colorsum < 383:
            newpixel = image.Pixel(0, 0, 255)
        else:
            newpixel = image.Pixel(255, 255, 0)
        img.setPixel(col, row, newpixel)
img.draw(win)
win.exitonclick()
```

2. Write a program that asks the user to type in some text, and then reports the number of characters and also the number of vowels that the user entered.

```
text = input("enter some text")

numchars = len(text)
numvowels = 0
for c in text:
   if c=="a" or c=="e" or c=="i" or c=="o" or c=="u":
        numvowels += 1

print("You entered {} characters, including {}
vowels.".format(numchars, numvowels))
```

3. Write a function firstAndLast(aString) that accepts a string parameter and returns a new string made up of the first two and the last two characters from the parameter string. However, if the string parameter has length less than 2, your function should return the empty string. Here are some examples:

```
firstAndLast("CS125") returns "CS25"
firstAndLast("hi") returns "hihi"
firstAndLast("a") returns ""

def firstAndLast(aString):
   if len(aString) < 2:
        return ""
   return aString[:2]+aString[-2:]

#testing
print(firstAndLast("CS125"))
print(firstAndLast("hi"))
print(firstAndLast("a"))</pre>
```

4. Write a function fraction(a, b) that accepts two numbers *a* and *b*. Your function should compute the fraction *a*/*b* and return it in a sentence, formatted to three decimal places, like this:

```
fraction(8, 3) returns "the fraction is 2.667"
```

```
def fraction(a, b):
    f = a/b
    text = "the fraction is {:.3f}".format(f)
    return text

#testing
print(fraction(8,3))
```

5. Web pages are built with HTML strings such as "
b>Yay", which prints Yay in bold text. The letter *b*, appearing between angle brackets, is called a *tag*. Tags come in pairs, and the second tag in the pair must have a slash before the tag name.

Write a function called makeTag that accepts a tag word and some text, and returns an HTML string with the text surrounded by properly-formatted tags.

For example:

```
makeTag("div", "some text") returns "<div>some text</div>"
makeTag("p", "paragraph") returns "paragraph"

def makeTag(tag, text):
    return "<"+tag+">"+text+"</"+tag+">"

#testing
print(makeTag("div", "some text"))
print(makeTag("b", "yay"))
```
